Ledger Validation Details

validation_check	failure_count	validation_status	validation_notes
Ledger Rollforward Tie-Out	0	PASS	Internal ledger roll-forward reconciled to transaction activity

Page Purpose

This page validates whether core reconciliation logic is reliable. It confirms ledger roll-forward results, controlled injection detection, evidence completeness, and whether Power BI KPIs tie back to SQL and Excel support.

This page proves that the internal ledger ties out and all controlled injected exceptions were detected.

Python Validation & Anomaly Monitoring
